

Tele HealthCare

P R O P O S A L

• Introduction

In today's fast-paced world, accessing quality healthcare should be easy and convenient. Cotgin's tele healthcare is a cutting-edge medical app designed to connect patients with specialist doctors through a seamless online platform. Our app allows users to book online appointments, consult with experienced specialists via video calls, and receive expert medical advice from the comfort of their homes.

• Overview

Cotgin's tele healthcare app is an innovative online medical consultation platform that allows patients to book appointments with specialist doctors, access virtual consultations via video or chat, and manage their health records digitally. The app features real-time doctor availability, secure payments, electronic prescriptions, and automated reminders to enhance healthcare accessibility. Built with modern technology, it ensures seamless user experience, secure data handling, and efficient healthcare management for both patients and doctors.

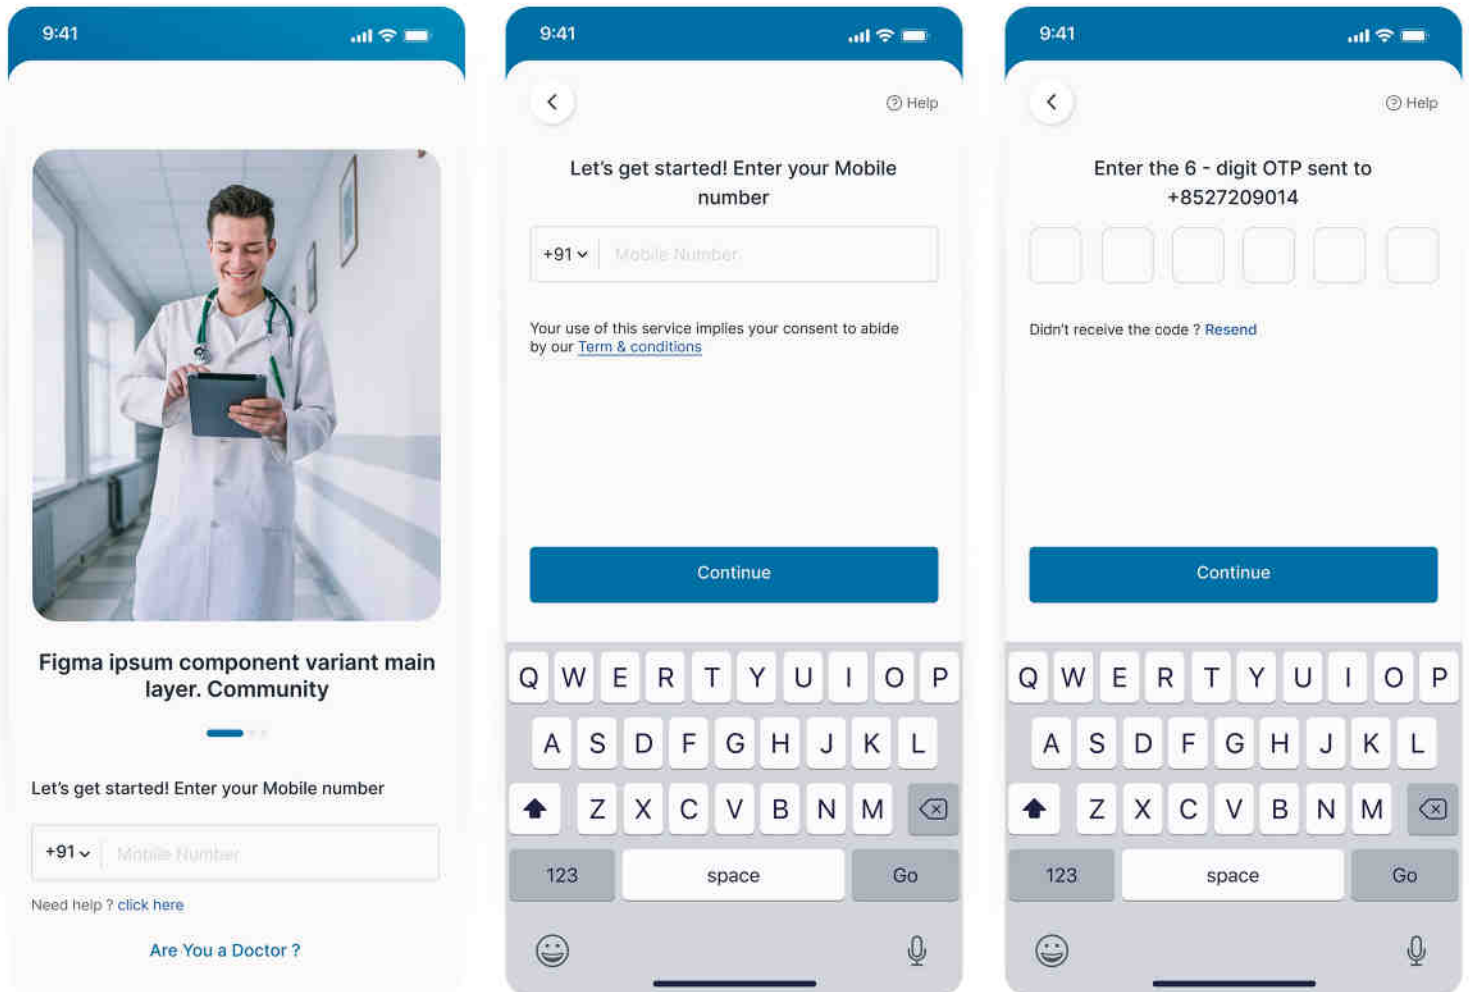

Feature Of Application

• Login

This medical app is a digital healthcare platform that allows patients to log in securely using their mobile number and book online appointments with specialist doctors. The app offers seamless virtual consultations via video or chat, digital prescriptions, and secure payment options.

• Online Appointments

This tele healthcare app schedules doctor appointments in advance for hassle-free medical consultations. Patients can choose from a wide range of specialists, book convenient time slots, and consult via video or chat. The app also features digital prescriptions, secure payments, and health record management, ensuring a smooth and efficient healthcare experience anytime, anywhere.

• Get Specialist Doctors

This app connects patients with highly qualified and experienced doctors from around the world. The platform features specialists with advanced degrees such as MD, MS, DM, MCh, and other prestigious qualifications. These doctors bring years of practical experience, ensuring patients receive expert advice and treatment. Whether for routine consultations or complex cases, the app offers access to the best medical professionals with a proven track record in their fields.

• Patient's Brief Details

This tele healthcare app provides a comprehensive healthcare solution where patients can log in securely and access their disease history and detailed medical records. The platform allows patients to upload and store vital health information, including previous diagnoses, treatments, allergies, test results, and medications. This helps doctors get a complete view of the patient's health history, ensuring personalized care and more accurate diagnoses. The app allows for easy updates and retrieval of medical data, ensuring continuity of care across consultations with specialists. Patients can manage their health effectively, and doctors can offer informed, precise treatment plans based on detailed historical data.

• Doctor's Profile

This app features a detailed individual profile for each doctor, allowing patients to explore comprehensive information about their medical qualifications, specialties, experience, and credentials. Each doctor's profile includes their educational background, certifications (MD, MS, DM, MCh, etc.), years of experience, patient ratings, and areas of expertise. This transparency helps patients make informed decisions when choosing a specialist. Additionally, doctors can showcase their treatment approach, consultation fees, and available time slots, providing a clear and accessible way for patients to connect with the right professional for their medical needs.

• Individual Account

This app offers a personalized My Account feature for both patients and doctors, giving them easy access to all their relevant details. For patients, the account stores personal information, health profiles, and medical history, including diagnoses, treatments, and prescriptions. It also tracks appointments, payment history, and provides notifications for upcoming consultations and follow-ups. Doctors can manage their professional details, such as qualifications and specialties, as well as set their availability and track appointments. The account allows doctors to access patient history, view feedback from consultations, and manage payments. This comprehensive system ensures both patients and doctors have a streamlined and organized experience, making healthcare management more efficient and convenient.

• Instant Notifications

This app includes a robust notification system to keep both patients and doctors updated on every relevant activity within the app. Patients receive timely alerts for appointment bookings, cancellations, reschedules, and reminders for upcoming consultations, follow-ups, and prescription refills. Doctors are notified about new appointments, patient queries, and feedback from consultations. The system also sends reminders for available time slots, payment confirmations, and health record updates. These notifications ensure that both users stay informed, helping them manage their healthcare activities effectively and ensuring no important details are missed.

• Secure Payment Confirmation

Tele healthcare app ensures a seamless payment confirmation system for every appointment. When patients book an appointment, they receive instant notifications confirming their payment, including details of the consultation fee, payment method, and the transaction ID. This confirmation is also available in their account history for easy reference.

• Doctor's Payment Claim

It offers a flexible payment claiming system for doctors, allowing them to claim their earnings on a weekly or monthly basis, depending on their agreement with the app team. Doctors can easily track their earnings, view transaction history, and submit claims for the desired payment cycle. Once a claim is submitted, it goes through a verification process before being processed for payment. This system ensures that doctors have control over their income flow, offering transparency, timely payouts, and a hassle-free experience for both the doctors and the app team.

Cotgin Analytics is a forward-thinking IT company dedicated to delivering innovative technology solutions across industries, with a specialized focus on the healthcare sector. As the trusted technology provider as Tele Healthcare, Cotgin Analytics brings years of expertise in software development, data analytics, and digital transformation to ensure that the healthcare app functions seamlessly, securely, and efficiently. By leveraging state-of-the-art technology, they provide high-performance platforms that enable healthcare providers and patients to interact effortlessly while improving overall healthcare delivery.

With a team of highly skilled professionals, Cotgin Analytics is committed to supporting the growth and scalability. Their solutions are designed to streamline operations, enhance data security, and ensure real-time performance, allowing doctors and patients to engage without barriers. Through continuous innovation, Cotgin Analytics works to drive the digital revolution in healthcare, optimizing processes and empowering both patients and medical professionals for better outcomes.
